Cisco Fishing Systems, Ltd. Customer –

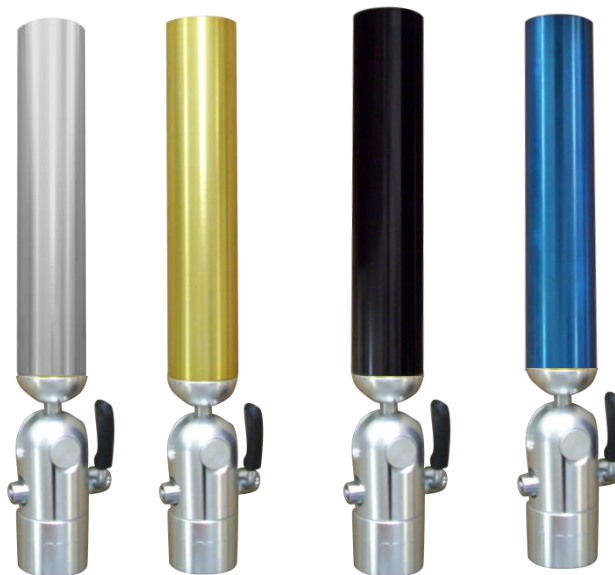

Here are so helpful hints for your rod holder:

1. Before attaching the tubes place a drop of light oil or a dab of petroleum jelly to the threads. **(left handed threads) Pre-Applied Upon Purchase**

Tubes will screw on easily, but be sure the tube is straight when starting on (tube screws on counter-clockwise).

2. To adjust the lock on the rod holder head you must first place the padded lever in the free position, then adjust the nut opposite of the padded lever.
3. Rod holders must be rinsed with fresh water after each use in saltwater.
4. All padded levers can be easily adjusted to different strengths by tightening or loosening the nut on the opposing side of the handle. Make sure any adjustments are made when the handle is in the open position.

Thank you for your purchase from Cisco Fishing Systems, Ltd. If you have any questions please call us at the number listed above.

Innovation Made Us #1, Quality Keeps Us There!
